Theme #	Themes	Code #	Code	Explanation
1	**Academic Identity and Professional Fulfilment**	1	Threats to Academic Identity	Concerns that GenAI can replicate or substitute core intellectual skills central to an academic's expert identity, role, and self-conception
		2	Devaluation of the Discipline	Perception that genai reduces the perceived value, complexity, or legitimacy of an academic or professional field, particularly in the eyes of others
		3	Loss of Intellectual Rewards	Reduced satisfaction, enjoyment, or sense of accomplishment when ai diminishes the learning, discovery, or intellectual challenge involved in academic work.
		4	Loss of Self-Worth	Feelings of reduced confidence, competence, or personal value associated with ai's ability to perform tasks related to one's expertise.
2	**Academic Integrity**	5	Feeling of “Cheating” When Using AI	Using GenAI feels like a violation of academic integrity.
		6	Distrust of Student Work	Deacreased confidence among instructors, peers, or institutions in the authenticity, originality, or reliability of student-produced work
		7	Declining Scholarly Quality	Proliferation of superficial, low-value scholarly outputs and the erosion of methodological rigor across peer review and publishing
		8	Responsible Use f AI	Thoughtful, cautious, and transparent use of GenAI with critical awareness of its limitations, error modes, and ethical boundaries
		9	Balancing Academic Integrity and Student Support	Instructors navigating the tension between maintaining academic standards and supporting student learning, amid pressure from students and the institution.
3	**Cognitive Offloading**	10	Cognitive Skill Erosion	Concerns that continuous reliance on GenAI and substituting independent practice with automated tool shortcuts weaken cognitive habits such as critical thinking, independent synthesis, curiosity, and sustained focus and and cause long-term decline in foundational disciplinary skills
		11	Overreliance on AI	Excessive dependence on GenAI outputs by students, researchers, or institutional leaders when making intellectual or administrative decisions
		12	False Sense of Mastery	An inflated, superficial perception among students or researchers of their own competence in a subject, resulting from effortless AI assistance rather than true learning
4	**Transformation of Academic Work**	13	Productivity Gains	Increased productivity (e.g., relies on AI for paper summaries)
		14	Increased Academic Workload	Expansion of overall work demands and administrative time spent redesigning courses, verifying outputs, and managing AI integration
		15	Shifting Practices and Priorities	GenAI changes what research and teaching are pursued, how they are conducted, and what kinds of contributions are valued, funded, or considered publishable.
		16	Collaboration Friction	Interpersonal tension and trust breakdowns among research collaborators stemming from differing AI ethics, disclosure practices, or offloaded work burden
5	**AI Adoption Pressure**	17	Develop AI Literacy	The urge to stay up to date with AI to stay relevant
		18	The “AI-Everything” Mandate	The pressure to incorporate AI in everything (grant application, teaching, research)
		19	Competitive Pressure to Use AI	Rising use by academics (driven by productivity competition) and by students due to pressure to keep up.
6	**Psychological and Emotional Impact**	20	Stress and Anxiety	Persistent psychological tension and anxiety arising from the rapid pace, uncertainties, and heightened demands surrounding GenAI in academia
		21	Output Quality Frustration	Mental exhaustion, annoyance, or demotivation resulting from repeated exposure to generic, flawed, or hallucinated AI-generated content
		22	Cognitive Overload	Mental fatigue stemming from evaluating AI outputs, deciding when and how to deploy tools, and processing fast-paced information flows
